

# B-WISER SCIENCE CAMP

# Summer 2019

## 8th grade SCIENCE CAMP

### JUNE 7-12

*"This camp is a blast!"*

The Buckeye Women In Science, Engineering, and Research Institute (**B-WISER**) was founded in 1990 by Dr. Lois Cook and the late Dr. Theodore R. "Ted" Williams, who passed away in 2005. Dr. Williams was a visionary who tirelessly promoted careers in science and engineering for women and minorities throughout his career and was nationally recognized for his efforts. The purpose of the B-WISER Institute is to enhance girls' interest in science and research.

**The B-WISER Summer Science Camp is a team-taught, hands-on, week-long residential experience in a state-of-the art science facility.**

The program is for girls who will complete the seventh grade this year. Dedicated to promoting the interest of young women in science and engineering, teachers provide each girl with a full laboratory experience. There will be no textbooks or tests. During the day, students take a full curriculum with classes in chemistry, physics, LEGO® robotics, model-robotics, biology, and geology. In the evening, prominent scientists share their enthusiasm in areas such as engineering, chemistry, boomerangs, and physics.

*"Science is so cool!"*
